

Isolepis marginata

Commonly: Coarse Club Rush

Vascular Plant Family: Cyperaceae

Flowers winter and spring

Isolepis marginata is an annual sedge up to 20cm tall. The stems are tufted with thin basal leaves up to 4cm long.

The inflorescence is of 1-6 spikelets with an erect or spreading basal bract which is longer than the inflorescence. The spikelets are green to dark brown up to 5mm long. The glumes are shiny dark brown or green with dark brown markings.
