

Triglochin trichophora

Commonly: No common name

Vascular Plant Family: Juncaginaceae

Flowers winter and spring

Triglochin trichophora is a tufted annual sedge up to 17.5 cm tall. The basal leaves are circular in cross section, up to 10cm long and 0.5mm wide. The flowers are green tinged red.

The fruit are narrowly conical, up to 3mm long and 0.8mm wide.

Occasionally there are small basal spurs at the base of the fruit.
